PROFESSIONAL SUMMARY

Senior QA Leader with 14+ years of experience in enterprise SaaS quality engineering, test management, and automation architecture. Proven success in leading distributed QA teams, defining end-to-end test strategies, establishing quality governance, and architecting scalable automation frameworks. Strong firsthand expertise in Playwright, Selenium, Jira, X-Ray, GitHub, CI/CD (Jenkins, GitHub Actions, GitLab). Recognized for improving QA maturity, reducing defect leakage, accelerating delivery cycles, and ensuring predictable, compliant, high-quality releases.

EXPERIENCE

Lead Quality Engineer / Test Manager

Granicus Technologies India Pvt Ltd | May 2022 - Present

- **Owned end-to-end QA strategy** across multiple squads, introducing **KPI-driven** quality governance (coverage, leakage, cycle time).
- Established structured release readiness and quality gate criteria across environments, improving release predictability.
- Drove RCA rigor and quality analytics, reducing defect resolution time by 25% and preventing recurring issues.
- Collaborated with Product, Engineering, and DevOps leaders to align quality strategy with business and delivery goals.
- Architected enterprise-grade automation frameworks using Playwright (**TypeScript, POM**) and **Playwright MCP** for AWS-hosted products, increasing automated coverage by 30%.
- Implemented automated quality gates integrated with **GitLab CI/CD**, reducing release cycle time by 20%.
- Designed automated schema validation, anomaly detection, and multi-environment data reliability checks.
- Introduced AI-assisted testing (**ChatGPT, GitHub Copilot, Cursor**), reducing manual effort in test design and defect triage by 30%.
- Mentored and coached 10+ QA engineers across geographies, developing technical skills and delivery ownership.
- Standardized QA processes, documentation, and best practices across teams to improve efficiency and consistency.

Test Manager

Cognizant Technology Solutions | January 2019 - May 2022

- Directed end-to-end QA for **Pearson's SaaS platform**, leading cross-functional teams across multiple releases and achieving 65% improvement in quality through process optimization and Agile delivery.
- Organized sprint ceremonies, planning, and stakeholder communication to ensure transparent, predictable releases.
- Managed QA forecasting, estimation, risk mitigation, and cross-team alignment.
- Architected Selenium-based automation (Java) integrated with Jenkins pipelines, increasing deployment efficiency by 30%.
- Designed automation dashboards using Power BI, reducing defect leakage, and improving reporting accuracy.
- Implemented **KPI-led** governance (**coverage, leakage, MTTR**), reducing production defects by 40%.
- Standardized framework patterns (**TestNG, Log4j, MVC**) to improve maintainability and audit readiness.
- Conducted **SQL Server** data validations, ensuring integrity and compliance with regulatory needs.
- Executed **RCA** documentation and change management controls, strengthening continuous improvement culture.

Consultant – QA LEAD

Virtusa Consulting Services Private Limited | November 2015 – January 2019

- Led functional and regression testing for payment processing dispute management system focused on PayPal payment networks, increasing test coverage by 25% and supporting PCI DSS compliance.
- Collaborated in PayPal Quarterly L2 Planning with cross-vertical teams to determine support requirements and release planning for Dispute and Risk Management processes, enhancing supply chain resilience.
- Analysed requirements, estimated efforts, and created Test Strategy for **PayPal GOPS** Product, reducing planning time by 15% and supporting financial modelling for resource allocation.
- Maintained regression automation scripts using **Selenium WebDriver 2.0** to ensure consistent test execution and process efficiency.
- Implemented TestNG Hybrid testing framework for smoke tests and automated API Testing using Rest Assured, improving test reliability.
- Leveraged **Git 2.12.2** for version control, enhancing code management and collaboration across global teams.
- Developed E2E Test scripts using Selenium WebDriver 2.0 to validate critical workflows and ensure operational efficiency.
- Monitored and reported testing activities, including results, coverage, resources, and defect status using Rally Tool, supporting KPI tracking and project transparency.
- Conducted web service testing using POSTMAN tool to validate API endpoints and data exchange, ensuring data security and compliance.

- Ensured end-to-end quality, traceability, and compliance.

Quality Assurance Engineer

Corporate Executive Board | April 2014 - November 2015

- Designed and developed robust UI frameworks using Java, improving automation reliability by 20% and supporting digital transformation initiatives.
- Led performance testing using VSTS and functional testing of RESTful services to ensure application scalability and optimize system performance.
- Analysed SQL Server bottlenecks using SQL profiler, optimizing query performance, and reducing latency, which contributed to measurable cost savings.
- Participated in Agile ceremonies and drove QA improvements in fast-paced sprints, increasing sprint velocity by 10% and promoting a culture of continuous improvement.
- Managed RTM and defect lifecycle across multiple agile projects to ensure timely defect resolution and alignment with client goals.
- Balanced **quality, reliability, and business speed** in fast-paced Agile environments

Quality Analyst

DCKAP Technologies | October 2011 - March 2014

- Collaborated with Sales and Business Analyst teams to analyse specifications and enhance Workload Product, aligning with evolving business needs and customer experience (CX) initiatives.
- Designed comprehensive Test Cases, Test Scripts, and Test Data to address identified requirements, consolidating them into robust Test Design documentation.
- Automated regression testing using TestNG, reducing manual effort by 30% and increasing test reliability.
- Implemented Page Object Model approach to minimize code redundancy and improve maintainability, supporting process optimization.
- Utilized Java with Selenium to evaluate web applications, increasing test efficiency and reliability while supporting Agile delivery.

Core Skills & Competencies

QA Strategy & Governance • Quality Engineering Leadership • Enterprise Test Architecture • Automation Transformation • Test Strategy, Planning & Estimation • Risk-Based Testing & Impact Analysis • Release & Sprint Planning • Quality Metrics, KPIs & Executive Reporting • Continuous Testing & CI/CD Quality Enablement • DevOps Integration • Compliance & Regulatory Standards • Defect Management & RCA • Test Data & Environment Management • Stakeholder & Executive Communication • Cross-Functional & Onshore–Offshore Team Leadership • Process Optimization & QA Maturity Roadmap • Automation Framework Design (Playwright, Selenium) • API & UI Automation • Performance, Accessibility & Security Testing • CI/CD (Jenkins, GitHub Actions, GitLab) • Jira, X-Ray, Confluence • SQL, AWS, VSTS • Programming (Java, TypeScript, JavaScript, Python) • Domain Expertise: SaaS, EdTech, Payments & Disputes • Agile / Scrum Delivery Models.

EDUCATION

Anna University | Jan 2006 – Jan 2011

M.Sc. – Software Engineering

CERTIFICATIONS

- Certified Tester – STQC
- Lean Six Sigma Black Belt
- Professional Scrum Master II (PSM II)
